

PRODUCT : Estoflox 4500

Description:

Estoflox 4500 is water Decoloring agent , cationic polymer which is specialized for decoloring, flocculating, COD decreasing and other applications.

Principal uses:

Waste water treatment
Process water
Water treatment – Coagulants/removal of color/decrease COD

Salient features:

Estoflox 4500 has to prepare 20-30% solution that can be dissolved easily in water just prior to application.

Estoflox 4500 has a shelf life of 45 Days when kept in a dry place at RT.

Application:

Estoflox 4500 has to be diluted with 2 to 5 times water prior to use. Now this solution can added directly to waste water.

Estoflox 4500 works best at pH 4-8 (of waste water).

It is recommended to use Estoflox 4500 with anionic flocculants and In organic Coagulants to get better result.

Properties:

Appearance : Clear to hazy liquid

Viscoisty : 50-150 cPs

Ionicity :Cationic

pH (30% w/w soln) : 2-5

Solid contents :40-45 %

Mfg. of Speciality Chemicals
