

PRODUCT : Estolube 60

Chemical composition

mixture of aliphatic polyetherester type linear polymer and tetra alkyl phosphonium sulfo isophthalate compound.

ESTOLUBE - 60 is a mixture of aliphatic polyetherester type linear polymer and tetra alkyl phosphonium sulfo isophthalate compound with an average chain length C12-act as an new generation antistatic cum lubricating agent. It is employed to prevent electrostatic pick-up which can occur both during sizing processes and when the finish fabric is in use.

The most suitable field of application are lubricating of yarn, penetration of size paste on low energy surfaces like polyester and polyamides, and to reduce static effect of high speed sizing of PA,PFY,PV,PC yarn

Product Details:

| Properties | Specifications |
|-------------------|-----------------------|
| Clear Yellow | Nonionic |
| Grade Standard | Technical Grade |
| Physical State | Liquid |
| Usage | Industrial |
| Packaging Size | 50 / 200 KGS |
| Packaging Type | HDPE Drums |
| Features | Additive |
